

eeZee Mouse™

Computer Input Device

The dawn of a new day in computer access has arrived.
Gone are the days of needing a hand operated mouse.

Quick & Easy To Operate

Tiny sensor can
mount to eyeglasses

NO Software Required

Tiny sensor can
mount to eyeglasses

Fully Compatible w/ ALL Hardware & Software

Introducing the **eeZee Mouse™**, family of computer input devices, using a revolutionary Body Sensor for computer control. This remarkable product provides full mouse functionality and is engineered to integrate with each user's unique abilities. This sensational development removes mouse functionality from the user's hand and puts it where the **user** wants.

The heart of this incredible system, a tiny Body Sensor, is worn or attached somewhere and "tilted" to activate cursor movements. Weighing less than 2 grams, this tiny sensor can literally be worn from "head-to-toe" and activated by ordinary body movements. The number of possibilities for sensor placement and activation are limited only by the imagination.

An amazing system designed to fit the user!

The Body Sensor produces fully proportional cursor movement. The user decides how much or how little tilt is required to match **their** needs.

Button functions (clicks & drags) are done with any type of external switch, or via microphone using sound detection, depending upon model. Models available are: PRO, SWITCH & CURSOR

These options are engineered to let each user choose the best location to operate the sensor, and most effective method to activate button functions.

Stylish Desktop unit needs only the
tiny Body sensor be activated

Quick and easy to setup & operate - Just Plug-in and GO!

This exciting new product is the first computer input device to utilize a cost effective body sensor for computer control. Operation and setup are quick and easy. No complicated software, setups, or special training is needed. Just plug-in & GO!

These extraordinary devices are compatible with any/all other hardware and software products. They are also portable and interchangeable between laptops, desktops, MACs, PCs, and Unix systems.

Accessories are available to enhance the capabilities of these astonishing units. The universal design approach allows us to offer custom features, often without additional costs.

Hang that old mouse out to dry &
